

IN THE CLAIMS:

1. (Cancelled)
2. (Currently amended) A universal meta model implemented on a computer

readable medium or in computer memory comprising

- a. means for representing a plurality of classes of objects;
- b. means for representing a plurality of default class behavior categories;
- c. means for representing a plurality of data members of classes of objects;
- d. means for representing a plurality of default member behavior categories;
- e. means for representing a plurality of relationships between classes of objects;
- f. means for representing a plurality of relationships between objects; and
- g. means responsive to at least one of a-f for modeling data formations and

validation constraints thereon.

3. (Original) A universal meta model as in claim 2 comprising means for representing a plurality of optional additional class behaviors for a plurality of class behavior categories.

4. (Original) A universal meta model as in claim 2 comprising means for representing a plurality of optional additional member behaviors for a plurality of member behavior categories.

5. (Original) A universal meta model as in claim 2 comprising means for representing a plurality of links between relationships between classes of objects.

6. (Original) A universal meta model as in claim 5 comprising means for representing a plurality of composite relationships composed of a plurality of links between a plurality of relationships between classes of objects.

7. (Original) A universal meta model as in claim 5 comprising means for representing a plurality of composite relationships composed of a plurality of links between a plurality of relationships between classes of objects.

8. (Original) A universal meta model as in claim 5 comprising means for representing direction of relation links.

9. (Original) A universal meta model as in claim 2 comprising means for representing a plurality of default relationship behavior categories.

10. (Original) A universal data editor component comprising

- a. a universal meta model as in claim 2;
- b. means for storing data instantiations of said universal meta model classes;
- c. means for storing data instantiations of said universal meta model members;
- d. means for storing data instantiations of said universal meta model relations; and
- e. means for storing data instantiations of said universal meta model relation links.

11. (Currently amended) A universal data editor component as in claim 10 comprising

- a. means for storing data instantiations of said universal meta model tree views;

and

b. means for storing data instantiations of said universal meta model tree levels[[]].

12. (Currently amended) A universal data editor component as in claim 10 comprising

a. means for storing data instantiations of said universal meta model elements representing instantiations of classes represented by said universal meta model classes; and

b. means for storing data instantiations of said universal meta model values representing instantiations of said universal meta model members[[]].

al 13. (Currently amended) A universal data editor component as in claim 10 comprising

a. means for storing data instantiations of said universal meta model elements representing instantiations of classes represented by said universal meta model classes; and

b. means for storing data instantiations of said universal meta model values representing instantiations of said universal meta model members[[]].

14. (Currently amended) A viewer and controller for universal data editor component comprising

a. a universal data editor component as in claim 10;

b. means for displaying a graphical representation of data;

c. means for displaying textual representation of data; and

d. means for displaying tabular representation of data[[]].

15. (Currently amended) A viewer and controller for universal data editor component as in claim 14 comprising

a. means for displaying a graphical representation of data formations;

b. means for displaying textual representation of data formations; and

c. means for displaying tabular representation of data formation[[]].

16. (Cancelled)
